

# CRUD Laravel

Feb 08, 2022

## Overview

In this assignment, you have to create a Laravel application by using the free bootstrap version.

1. Create a Laravel project
2. Make authentication and redirect user to the dashboard
3. Add user profile picture in separate table and make relation one-to-one with users table.
4. In dashboard when user login, shows its display picture as well
5. On dashboard - where user can simply select one video, one image and you will **compress** it and upload the file into public folder. You will same the path in the database and will also make the filename unique. Login screen:  
<https://getbootstrap.com/docs/4.0/examples/sign-in/> you can use the same UI for upload file and image after authentication.
6. In this step, you will create APIs with authentication key & return video and image path in JSON response.
7. In web dashboard, you will show the compressed video and image along with pagination of 6. You can use this theme for that  
<https://getbootstrap.com/docs/4.0/examples/album/>

Note: You must use Laravel stable version, follow best practices for APIs & authentication.
